

Pipes for Economical Construction

Cavity Pipes

Application

- in machine base plates
- as mast foundation
- for high stockhouses
- as cavity in dormers, walls, base and ceiling plates

Your Advantage

- high shearing strength
- no stabilizing or reinforcement measures
- low weight
- availability within short periods

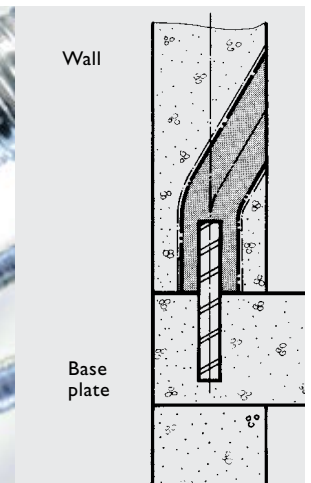

Flexible Pipes

Application

- as duct for tie rods for subsequent press-fitting
- grouting in finished parts
- in tie beams as recess pipes for threaded fasteners

Your Advantage

- high shearing strength
- high mechanical resistance
- also by bending; the circular cross-section is still standing

Sheathing Cases

Application

- top foundation
- lateral Foundation
- for strip foundations

Your Advantage

- sheathing for statically perfect foundations
- reduction of the formwork costs
- reliable availability of the sheathing cases within short periods
- flexible time planning
- exact compliance with the specified sheathing dimensions

Pipes for Economical Construction

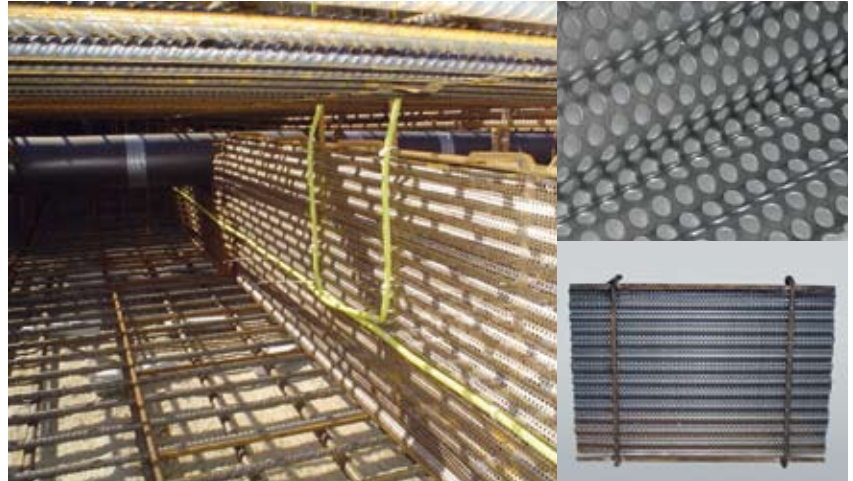

Sheathings with Interlocking Groove

They are installed in reinforcement layers

- as casings in ceilings, foundations and base plates

Your Advantage

- availability ready for installation – according to your requirements
- good connection and compression in the gap zone
- easy installation
- no tools required for installation

Pipes for Special Applications

As protective pipes for bored piles

- as top formwork for bored piles
- as formwork pipes
- for temporary applications in brook bed restoration or in treatment plants

Your Advantage

- low weight
- high mechanical resistance
- all Fittings are available
