

UNIQUE PIPES FOR A WIDE RANGE OF USE.

Pipes for industrial applications

Technically sophisticated products, economic production

Precise and versatile:

The production

Our extensive machinery and modern production methods make it possible to produce the appropriate pipe for virtually any application. On approximately 3000 sqm, our DIN EN ISO 9001:2000 certified company produces thin-walled pipes made of steel or stainless steel.

Application fields:

- Mechanical and plant engineering industry
- Filter technology
- Chemical industry
- Agricultural and construction industries

The advantages at a glance

Thin-walled, longitudinally welded pipes have a wide application range owing to their properties. Besides material-related advantages, they also provide various constructive advantages.

- Light component weight by use of thin-walled (e.g. 0.2 – 3 mm) steel, therefore easy to handle
- Non-flammable
- They do not react with the system media because appropriate materials are used

Pipes can also be manufactured with a profile, additional weight savings are possible while increasing the surface area at the same time.

Economical and custom designed:

The product range

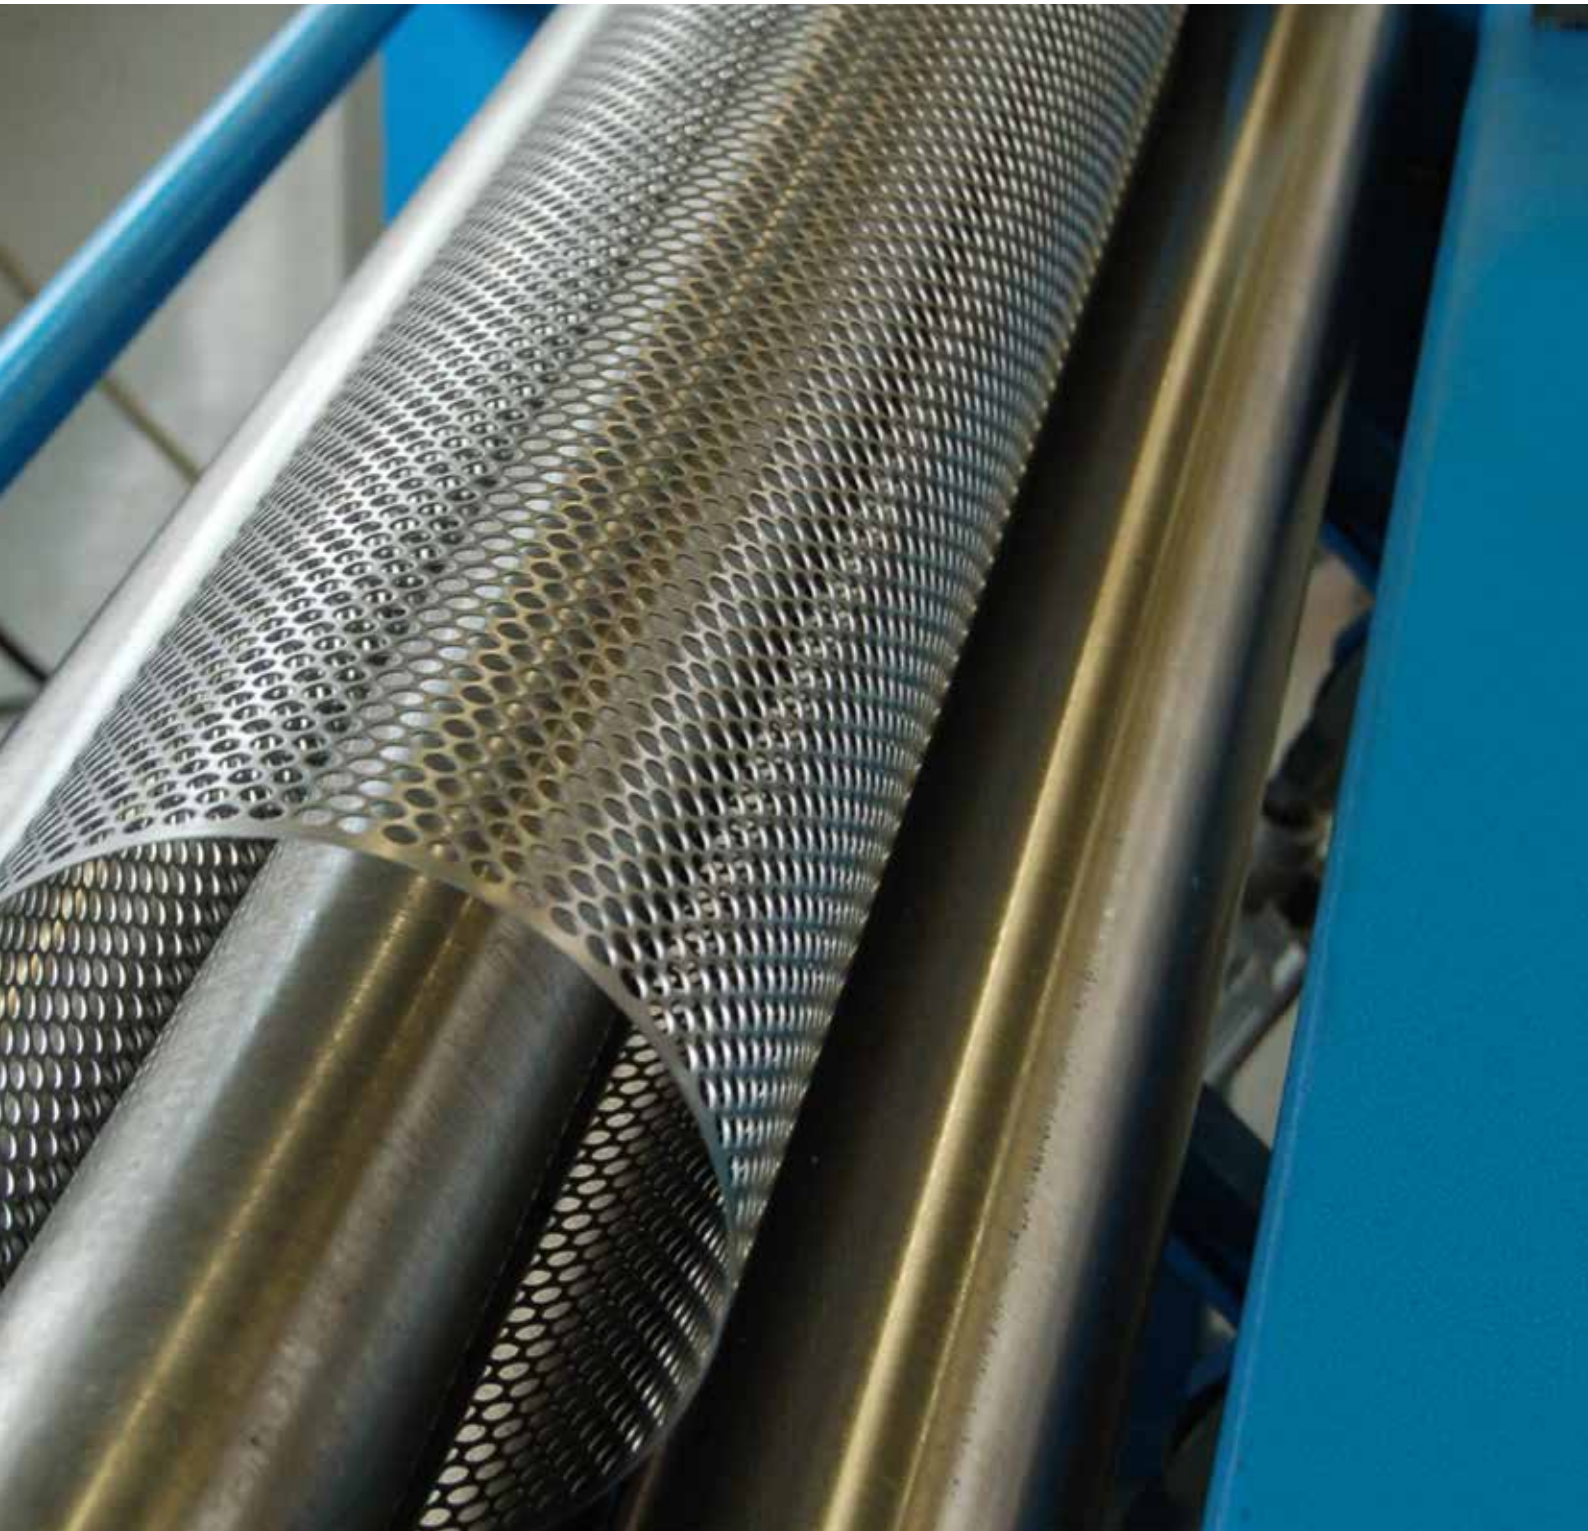

Depending on the application, we manufacture a wide variety of pipe shapes and designs, which can be supplied ready for installation.

- Round and oblong holes in different diameters
- Beaded and/or lugged pipes
- Grid structures, perforations
- Shaped apertures
- Pipes made of different materials or coatings
- Diameters from 15 mm to 800 mm can be manufactured
- Lengths up to 10 meters are available, individual fixed lengths on request

Processing know-how

Reliability, punctuality and quality are important criteria for long-term customer relationships. The basis for this is set by our many years experience in the field of metal and pipe manufacturing. Thereby, we ensure accurate order processing, from consulting to the technologically sophisticated design, through to our highly efficient service. In addition to the wide range of series production, we offer order-specific complete solutions, or semi-finished products for various industries. This also includes connections with round, square or oval cut-outs, or bevel cuts in any angle.

wbr, the pipe specialist

wbr is one of the leading manufacturers of metal pipes for a wide range of applications. We convince with our service and a mature product quality. On the basis of our many years of experience we are constantly working to provide our international customers modern, future-oriented solutions.
