

Company portrait

wbr Rohr- und Bauelemente GmbH is the most technologically advanced supplier of pipes for construction use, as well as for industrial solutions, heating technology and filter manufacturing. Flexible production methods allow us to produce in an economical way. Our customers rely on our extensive experience with tubes for various applications. Lean Management guarantees fast and suitable solutions for nearly all kind of requirements.

PIPES WITH PROFILE

The higher the variety of applications,
the wider the range of customized versions

Technically sophisticated products, economic production

Precise and versatile:

The production

Our extensive machinery and modern production methods make it possible to produce the appropriate pipe for virtually any application. On approximately 3000 sqm, our DIN EN ISO 9001:2000 certified company produces thin-walled pipes made of steel or stainless steel.

Application fields:

- Mechanical and plant engineering industry
- Filter technology
- Chemical industry
- Agricultural and construction industries

Your Benefits at a Glance

Thin-walled longitudinally welded pipes made from solid material or from perforated and fabric material are applied in many fields of industry because of their positive properties. In addition to their material-based benefits, they also offer numerous constructive advantages. Our manufacturing capabilities to form thin-walled pipe versions with slight stiffening corrugations create absolutely new options for the user. On one hand, material can be saved by reducing wall thicknesses in combination with almost no loss of mechanical stability, which provides positive support in the demand for a reduction of weight with a high variety of parts.

Economical and custom designed:

The product range

Depending on the application, we manufacture a wide variety of pipe shapes and designs, which can be supplied ready for installation.

- Round and oblong holes in different diameters
- Beaded and/or lugged pipes
- Grid structures, perforations
- Shaped apertures
- Pipes made of different materials or coatings
- Diameters from 15 mm to 800 mm can be manufactured
- Lengths up to 10 meters are available, individual fixed lengths on request

Processing know-how

Reliability, punctuality and quality are important criteria for long-term customer relationships. The basis for this is set by our many years experience in the field of metal and pipe manufacturing. Thereby, we ensure accurate order processing, from consulting to the technologically sophisticated design, through to our highly efficient service. In addition to the wide range of series production, we offer order-specific complete solutions, or semi-finished products for various industries.
